DETAILED ACTION

Claims 22-64, are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Claim Objections

2) Claims are not recited with claims status identifiers.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3) Claims 1-20, are rejected under 35 U.S.C. 102(b) as being anticipated by Scherb (WO 03/000002)(published 3 January 2003). English version of the document, US 2004/0237210, is relied upon for the Office Action.

Claims 1-8, 15, 17-20: Scherb discloses a method of making a structured web in a paper machine. As, for example, in Figure 3, a fiber slurry is being fed from headbox 48 into a nip formed between a structured fabric 14 and a forming fabric 42 over forming

Art Unit: 1731

roll 46, thus creating fiber web 12. The web formed is a structured web, shaped in form of a plurality of thicker fiber valleys and leaner fiber dales, the structure having zonally different fabric permeability and different basis weight at the valleys and at the dales. The web dewatering occurs through the structured fabric 14. Also dewatering occurs via suction box 16 on the side of structured fabric ([0062] to [0091], and Figures 1-5).

Claims 9-10: the structured web proceeds to dewatering apparatus 34, where the web contacts clothing 36 over suction roll 38, where pressure is applied to the web and suction is applied by vacuum through suction roll 38 and clothing 36.

Claims 11-12, 16: the structured web is then transferred from fabric 14 onto a Yankee dryer at point 18. See Fig. 3.

Claims 13-14: the structured fabric is formed as described in the above method claims.

4) Claim 21 is rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Scherb (WO 03/000002)(published 3 January 2003). English version of the document, US 2004/0237210, is relied upon for the Office Action.

Scherb does not disclose the moisture content of the structured web, however it is inherent or in the least it would have been obvious, to one skilled in the art at the time the invention was made, that the web structure prior to drying, would have a greater amount of moisture in areas of greater amount of fibers and less amount of moisture in areas having lesser amount of fibers to contain said moisture.
